What is Dirigible Derby?

2-4 local multiplayer game where players play as hot-air balloons with rockets on each side of their basket, and spikes on the bottom.

Each player gets 3 lives. When a player is popped, they lose a life. When you're out of lives, your balloon does not respawn.

Goal: Be the last balloon left floating.

2-4 Players

OBJECTIVE

CONTROLS

Left Engine

Right Engine

Inflate

Deflate

What'd we do right in the game?

- ▷ It's fun as heck
- ▷ Core game mechanic worked right off the bat
- ▷ Game stayed pretty much the same from concept -> prototype -> final
- ▷ In-game bug reporting and debugging tools
 - Didn't use as much as we could have, but definitely nice to have!

What'd we do wrong in the game?

- ▷ Didn't meet all of our late-production goals
 - Polishing the spike collision
 - More SFX, such as balloons bouncing off things
 - Multiple maps (with it, a map selection screen)
 - Player customization in the player lobby
 - etc.
- ▷ Controls feel frustrating sometimes, a bit of a learning curve
- ▷ Still feels a bit rough around the edges:
 - Colliders are a little wonky
 - Needs more level design work

What went right in production?

- ▷ Team structure, clear roles
- ▷ Delegation of tasks
- ▷ Communication
- ▷ Keeping up with deadlines and expectations per week
- ▷ Original scope was great!
- ▷ Quick turnaround on core gameplay, helped for the last couple weeks of the project

What went wrong in production?

- ▷ Workload imbalance in the beginning
 - Went OK though, because the team member who felt they weren't doing enough communicated that, and we were able to adjust course
- ▷ Spring break and GDC
 - Communication was on the low, so was work on the project in general
- ▷ Overscoped a bit right before spring break and GDC, had to cut some polish features
 - Nothing major though, which is nice!
- ▷ Didn't make a single build until... last night - and there are some issues
- ▷ Didn't do enough playtesting, clunky gameplay could have been fixed
- ▷ Also this:

Your project was last saved with a different version of Unity.

D:/GameProjects/DirigibleDerby/320-project-2

The saved project (2017.4.0f1) does not match the launched editor (2017.3.1f1).

This may require re-import. Please be aware that opening in an older version is unsupported.

Note that if a build target installation is missing, this may also cause a re-import.

Lessons learned

- ▷ There are multiple ways members could put in equal amount of work
- ▷ GDC is a productivity killer
- ▷ Small scope = quick implementation = more time to polish & less stress during the last weeks of the project
- ▷ Playtest more!
- ▷ BUILD EARLY, BUILD A LOT (helps if you're playtesting more)

What next?

- ▷ Fix issues in build
- ▷ Clean up gameplay issues
- ▷ New maps/stages
 - Map select menu
- ▷ Character customization
- ▷ Faces!!
- ▷ More SFX
- ▷ Environmental hazards
- ▷ Powerups
